Panorama® Window Films: Success Stories

Habitat for Humanity, Sarasota, Florida

Problem:

Cost effective measure needed to improve windows and reduce heat infil ra ion

Solution:

Solar Gard Panorama Slate 30

Renef ts

Donation of product and labor maximized repair dollars

Lower summertime temperatures inside the home

The Habitat for Humanity team worked with Solar-X to improve the windows on a home in need. From Left to Right: Bud Rives, Foreman; Lyman MacNutt, President of Solar-X; and Dean Shelton, Director of Construction and Field Operations.

When a family in Sarasota, Florida could not afford the high costs of essential repairs to their home, they applied to Sarasota's Habitat for Humanity for help. Habitat for Humanity, a non-prof t organization committed to providing decent affordable housing, came to their aid. By securing an interestfree loan from the Offce of Housing and Community Development, Habitat was able to fund the muchneeded repairs.

The house had been home to the family since 1972 but

needed many repairs due to years of weather damage and f nancial constraints. Habitat was faced with two problems:

- How could the loan stretch to cover all the necessary repairs?
- How could they make the home as energy efficient as possible so the couple could avoid facing staggering utility bills in the future?

After a careful assessment of the repairs needed, Habitat's Director of Construction deemed the windows of the home to be in decent shape. Rather than spending money on replacement windows, funds could be better spent to improve the windows' efficiency and aesthetics.

Industry veteran, Lyman MacNutt, President of Solar-X, was there to help. He recommended Solar Gard® Panorama® Slate 30, knowing it could signif cantly reduce heat build-up and keep the home cooler, even under Florida's hot sun. At the same time, the homeowners could still take advantage of the bright natural light that would

shine through. In addition, this flm gave the home a more modern look and added a bit of privacy for its occupants.

MacNutt worked with Panorama window f Im to coordinate a donation of window f Im and he offered his labor free-of-charge. Solar-X and Panorama's joint donation of labor and product conserved funds in two signif cant ways:

 Retrof tting the windows with flm was more costeffective than replacing
